

CarTrack NG — Product Brief

Simple Car Inventory & Consignment Management Platform

For Used Car Dealers & Auto Stands in Nigeria

1. Product Overview

CarTrack NG is a **simple car inventory management system** built specifically for Nigerian car dealers. It handles **all vehicles in a dealer's possession** — whether dealer-owned or consignment cars (owned by third parties, which make up the majority).

It helps dealers:

- Keep **clear records** of each car and its owner
- Track **vehicle movement** (out for inspection, test drive, or showing)
- Track **prices, commissions, and revenue**
- Reduce disputes, losses, and missing vehicles

This is not another ERP. Just a practical tool dealers can use every day.

2. Problem Statement

Most used car dealers in Nigeria face these challenges:

Problem	Impact
Cars belong to multiple private owners , not the dealer	No single source of truth
Records kept in notebooks, WhatsApp chats, or memory	Lost records, disputes
No tracking when cars leave the stand	Missing vehicles, theft risk
No formal agreements with owners	Disputes over price, commission, release dates
Poor visibility into inventory performance	Don't know what's selling or stuck

3. Target Users

- Used car dealers and auto stands
 - Independent car brokers
 - Car marts with multiple sales agents
 - Small to mid-sized dealerships (5–300 cars)
-

4. Design Principles

Principle	What It Means
Simplicity first	Usable by anyone with a smartphone
Minimal data entry	Fast car registration (under 3 minutes)
Trust & accountability	Clear ownership and movement logs
Supports both models	Works for dealer-owned and consignment cars

5. Core Features

5.1 Car Intake & Registration

When a car arrives at the stand, capture:

Vehicle Details:

- Brand, Model, Year, Colour
- VIN / Chassis number
- Plate number (if available)
- Date and time of arrival

Photos:

- Exterior (front, back, sides)
- Interior and car keys
- Dashboard / Odometer
- Existing damages or issues

Condition:

- General state (checklist)
 - Known issues (text notes)
-

5.2 Car Owner Record (For Consignment Cars)

For consignment vehicles, each car is linked to its owner with:

- Full name and phone number
- Photo and ID document (optional)
- Digital signature

Agreement Terms:

- Asking price and minimum acceptable price
- Dealer commission (fixed or percentage)
- Consignment duration

This creates **clear proof of ownership and agreement**.

For dealer-owned cars, simply mark as "Dealer Owned" —no owner record needed.

5.3 Vehicle Movement Tracking

Every time a car leaves the stand:

Check-Out: Date/time, purpose, person responsible, expected return, odometer photo

Check-In: Date/time, condition check, any new issues, notes

This feature helps **prevent losses, theft, and disputes.**

5.4 Sales & Revenue Tracking

For each sale:

- Final sale price and buyer details
- Owner payout (auto-calculated)
- Dealer commission (auto-calculated)
- Payment status tracking

Dashboard shows: Total cars, cars sold, revenue earned, outstanding payments to owners.

5.5 Inventory Status

Each car has a clear, color-coded status:

Status	Meaning
Available	Ready for sale
Out	Left the stand for showing, test drive, etc.
Reserved	Buyer interested, pending payment
Sold	Sale completed
Returned	Returned to owner unsold

5.6 Key Tracking

Track car keys separately from the vehicle:

- Number of keys received at intake
- Photo of keys
- Key location (office, safe, with agent)

- Key handover log (who has the keys and when)
-

6. Value Proposition

- Clear records and accountability
 - Fewer disputes with car owners
 - Better control over inventory movement
 - Clear visibility into profits
-

One-Line Pitch

"A simple tool that helps Nigerian car dealers track every car on their stand, every movement, and every naira they earn."
